

Azure Information Protection

Protect sensitive documents—inside and outside your firm.

Identity and access management.

Empower users to encrypt, share, track, and revoke sensitive documents. This is the information rights management solution that the industry has been waiting for.

Protect your data

Wherever it's stored and whenever it travels.

Natively integrated

AIP-protected documents can be opened by any Microsoft Office user.

Data protection and governance across endpoints, apps, cloud services, and on-premises systems

Users easily set permissions with customizer macro buttons, track who opened their documents, and revoke access.

Comprehensive back-end auditing and proactive risk monitoring capabilities

Detects social security and credit card numbers to automatically set policy-based actions.

Real-time restriction of user actions during high-risk sessions in cloud apps.

Unified approach to discovering, classifying, and labeling sensitive data
