

Managed Server Patching

Automated, timely updates for your environment.

Your team doesn't have to stay up all night anymore.

Relying on sophisticated automation and a highly certified team, Managed Server Patching makes burdensome manual updates a thing of the past.

No email downtime

Custom script and schedule creation

Regular reports and status meetings

Security fixes and feature updates, including:

- Windows Server 2012, 2012 R2, 2008, 2016, 2019
- SQL
- Exchange

"We have a great internal team but also have a lot of projects on our plate. This left us struggling to keep our servers updated, given our users' desire for minimal maintenance windows. As we were working with Kraft Kennedy on other projects, we asked if they would help.

Using their tools and staff, we configured a methodology to patch our 300 Windows servers on a monthly basis, with an acceptable end user impact. The servers being patched are across multiple sites and include both physical as well as virtual servers. Given the ever-increasing security threats, partnering with Kraft Kennedy for these services has provided our firm with improved security."

Sam Blumenstyk, Manager, Technology Operations, AmLaw 200 firm

24/7/365

Certified engineers monitor the entire patching process and are the first line of support for any issues.

Compatibility testing

We perform compatibility testing before applying patches to ensure a smooth update process.

Month-to-month options

No annual contract required.
